What is cellulitis?

Cellulitis is a bacterial skin infection that causes inflammation and swelling. It can occur anywhere on the body, but it is most common on the legs, feet, and face. Cellulitis is caused by bacteria that enter the skin through a cut, scrape, or other break in the skin.

Symptoms of cellulitis

The symptoms of cellulitis can vary depending on the severity of the infection. Mild cellulitis may cause only mild redness and swelling. More severe cellulitis can cause pain, fever, chills, and nausea. In some cases, cellulitis can lead to serious complications, such as sepsis or amputation.

Diagnosis of cellulitis

Cellulitis is diagnosed based on a physical examination and a medical history. Your doctor will ask you about your symptoms and examine the affected area. Your doctor may also Free Download blood tests or imaging tests to confirm the diagnosis.

Treatment of cellulitis

The treatment of cellulitis depends on the severity of the infection. Mild cellulitis can be treated with oral antibiotics. More severe cellulitis may require intravenous antibiotics or hospitalization.

Related conditions

Cellulitis can be associated with a number of other conditions, including:

- Erysipelas: Erysipelas is a more superficial form of cellulitis that affects the upper layers of the skin. It is often caused by the same bacteria that cause cellulitis.
- Lymphangitis: Lymphangitis is an infection of the lymphatic vessels. It can occur in conjunction with cellulitis or erysipelas.
- Necrotizing fasciitis: Necrotizing fasciitis is a rare but serious infection that can destroy the skin, muscles, and other tissues. It is often caused by the same bacteria that cause cellulitis.

Prevention of cellulitis

There are a number of things you can do to prevent cellulitis, including:

- Keep your skin clean and dry.
- Cover any cuts or scrapes with a bandage.

- Avoid contact with people who have cellulitis.
- See your doctor right away if you have any symptoms of cellulitis.

Outlook for cellulitis

The outlook for cellulitis is generally good. With prompt treatment, most people recover completely. However, cellulitis can lead to serious complications in some cases. It is important to see your doctor right away if you have any symptoms of cellulitis.

Cellulitis is a common skin infection that can be caused by a variety of bacteria. The symptoms of cellulitis can vary depending on the severity of the infection. Mild cellulitis can be treated with oral antibiotics. More severe cellulitis may require intravenous antibiotics or hospitalization.
