Refractive errors are the most common cause of blurred vision. They occur when the shape of the eye does not allow light to focus properly on the retina, the light-sensitive tissue at the back of the eye.

Eye diseases, such as macular degeneration and diabetic retinopathy, can also cause blurred vision. These diseases damage the retina or other parts of the eye, which can lead to vision loss.

Systemic conditions, such as diabetes and high blood pressure, can also cause blurred vision. These conditions can damage the blood vessels in the eye, which can lead to vision problems.

## **Symptoms of Blurred Vision**

The symptoms of blurred vision can vary depending on the cause.

Common symptoms include:

- Difficulty seeing objects clearly at a distance or close up
- Double vision
- Seeing halos around lights
- Eye pain or discomfort
- Headaches

## **Diagnosis of Blurred Vision**

If you are experiencing blurred vision, it is important to see an eye doctor for a diagnosis. The doctor will ask about your symptoms and medical history, and perform a comprehensive eye exam.

The eye exam will include:

- A visual acuity test to measure your vision
- A refraction test to check for refractive errors
- A dilated eye exam to examine the inside of your eye

## **Treatment for Blurred Vision**

The treatment for blurred vision depends on the cause. Refractive errors can be corrected with eyeglasses, contact lenses, or laser eye surgery.

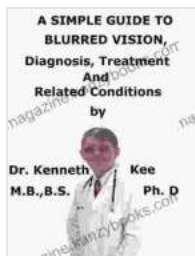

Eye diseases and systemic conditions that cause blurred vision may require medical treatment. Treatment options may include medications, injections, or surgery.

## Related Conditions

Blurred vision can be a symptom of a number of other eye conditions, including:

- Macular degeneration
- Diabetic retinopathy
- Glaucoma
- Cataracts
- Retinal detachment

It is important to see an eye doctor for a diagnosis if you are experiencing blurred vision, especially if you have other symptoms, such as eye pain, double vision, or headaches. Early diagnosis and treatment can help to prevent vision loss.
