Uveitis can cause a variety of symptoms, including:

- Eye pain
- Redness
- Blurred vision
- Floaters

- Light sensitivity

Uveitis can be diagnosed with a variety of tests, including:

- Eye exam
- Blood tests
- Imaging tests

Treatment for uveitis depends on the underlying cause. Treatment may include:

- Eye drops
- Oral medications
- Injections
- Surgery

Related Conditions

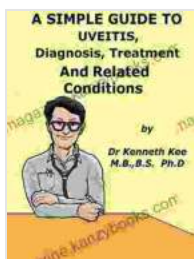

Uveitis can be associated with a variety of related conditions, including:

- Glaucoma
- Cataracts
- Retinal detachment
- Macular degeneration

It is important to see a doctor if you experience any symptoms of uveitis. Early diagnosis and treatment can help to prevent serious complications.

Uveitis is a serious condition that can lead to vision loss if left untreated. However, with early diagnosis and treatment, most people with uveitis can achieve good vision.

If you have any questions about uveitis, please speak to your doctor.
